

Assignment 4: Write a SELECT query to retrieve all columns from a 'customers' table, and modify it to return only the customer's name and email address for customers in a specific city.

SQL Command:

```
create table customer
```

```
(
```

```
id number(10) primary key,
```

```
name varchar2(20),
```

```
email address varchar2(20),
```

```
location varchar2(20)
```

```
);
```

```
insert into customer values(5, 'ee', 'ee@gmail.com', 'KA');
```

```
select * from customer;
```

```
select name, location
```

```
from customer
```

```
where location='TN';
```
